

WHAT IS CLAIMED IS:

1. An image data communication apparatus connected to an image data source and to a network, and transmitting image data attached to an e-mail to a receiving apparatus via the LAN, the e-mail including a mail from command and a mail message, the image data communication apparatus comprising;

a memory configured to store a default mail address;

a panel section configured to input a mail address of a user to the image data communication apparatus; and

a controller configured to set the default mail address into the mail from command of the e-mail to which the image data is attached when the mail address of the user is not input by the panel section;

the controller being configured to set the mail address of the user, input by the panel section, into the mail from command of the e-mail to which the image data is attached when the mail address of the user is input by the panel section, whereby, when an error occurs, the mail address of the user set into the mail from command of the e-mail is utilized as a destination of a mail error message.

2. The image data communication apparatus according to claim 1, wherein the image data source comprises a scanner connected to the image communication data apparatus.

3. The image data communication apparatus according to claim 1, wherein the panel section comprises a personal computer connected to the image data communication apparatus.

4. The image data communication apparatus according to claim 3, wherein the personal computer displays an HTML document for inputting the mail address of the user to the image data communication apparatus.

5. The image data communication apparatus according to claim 1, wherein the image data attached to the e-mail is converted into a format for e-mail transmission.

6. An image data communication apparatus connected to an image data source and to a network, and transmitting image data attached to an e-mail to a receiving apparatus via the LAN, the e-mail including a mail from command and a mail message, the image data communication apparatus comprising;

a memory configured to store a default mail address;

a panel section configured to input a mail address of a user to the image data communication apparatus; and

a controller configured to set the default mail address into the mail from command of the e-mail to which the image data is attached when the mail address of the user is not input by the panel section;

the controller being configured to set the mail address of the user, input by the panel section, into the mail from command of the e-mail to which the image data is attached when the mail address of the user is input by the panel section, whereby, when an error occurs, a mail error message is returned to the mail address of the user.

7. The image data communication apparatus according to claim 6, wherein the image data source comprises a scanner connected to the image communication data apparatus.

8. The image data communication apparatus according to claim 6, wherein the panel section comprises a personal computer connected to the image data communication apparatus.

9. The image data communication apparatus according to claim 8, wherein the personal computer displays an HTML document for inputting the mail address of the user to the image data communication apparatus.

10. The image data communication apparatus according to claim 6, wherein the image data attached to the e-mail is converted into a format for e-mail transmission.

11. An image data communication apparatus connected to an image data source and to a network, and transmitting image data attached to an e-mail to a receiving apparatus via the LAN, the e-mail including a mail from command and a mail message, the image data communication apparatus comprising;

a memory configured to store a default mail address;

a panel section configured to input a mail address of a user to the image data communication apparatus; and

a controller configured to set the default mail address into the mail from command of the e-mail to which the image data is attached when the mail address of the user is not input by the panel section;

the controller being configured to set the mail address of the user, input by the panel section, into the mail from command of the e-mail to which the image data is attached when the mail address of the user is input by the panel section, whereby, when an error occurs, a mail error message is returned to the mail address of the user, the mail error message indicating an error in one of transmission of the e-mail by the image data communication apparatus and reception of the e-mail by the receiving apparatus.

12. The image data communication apparatus according to claim 11, wherein the image data source comprises a scanner connected to the image communication data apparatus.

13. The image data communication apparatus according to claim 11, wherein the panel section comprises a personal computer connected to the image data communication apparatus.

14. The image data communication apparatus according to claim 13, wherein the personal computer displays an HTML document for inputting the mail address of the user to the image data communication apparatus.

15. The image data communication apparatus according to claim 11, wherein the image data attached to the e-mail is converted into a format for e-mail transmission.

16. An image data communication apparatus connected to a network, the image data communication apparatus comprising:

a transmitter configured to transmit image data attached to an e-mail to a receiving apparatus via the LAN, the e-mail including a mail from command and a mail message;

a memory configured to store a default mail address;

a panel section configured to input a mail address of a user to the image data communication apparatus; and

a controller configured to set the default mail address into the mail from command of the e-mail to which the image data is attached when the mail address of the user is not input by the panel section;

the controller being configured to set the mail address of the user, input by the panel section, into the mail from command of the e-mail to which the image data is attached when the mail address of the user is input by the panel section, whereby, when an error occurs, the mail address of the user set into the mail from command of the e-mail is utilized as a destination of a mail error message.

P24510.02

17. The image data communication apparatus according to claim 16, wherein the image data attached to the e-mail is converted into a format for e-mail transmission.

18. An image data communication apparatus connected to a network, the image data communication apparatus comprising:

a transmitter configured to transmit image data attached to an e-mail to a receiving apparatus via the LAN, the e-mail including a mail from command and a mail message;

a memory configured to store a default mail address;

a panel section configured to input a mail address of a user to the image data communication apparatus; and

a controller configured to set the default mail address into the mail from command of the e-mail to which the image data is attached when the mail address of the user is not input by the panel section;

the controller being configured to set the mail address of the user, input by the panel section, into the mail from command of the e-mail to which the image data is attached when the mail address of the user is input by the panel section, whereby, when an error occurs, a mail error message is returned to the mail address of the user.

19. The image data communication apparatus according to claim 18, wherein the image data attached to the e-mail is converted into a format for e-mail transmission.

20. An image data communication apparatus connected to a network, the image data communication apparatus comprising:

P24510.02

a transmitter configured to transmit image data attached to an e-mail to a receiving apparatus via the LAN, the e-mail including a mail from command and a mail message;

a memory configured to store a default mail address;

a panel section configured to input a mail address of a user to the image data communication apparatus; and

a controller configured to set the default mail address into the mail from command of the e-mail to which the image data is attached when the mail address of the user is not input by the panel section;

the controller being configured to set the mail address of the user, input by the panel section, into the mail from command of the e-mail to which the image data is attached when the mail address of the user is input by the panel section, whereby, when an error occurs, a mail error message is returned to the mail address of the user, the mail error message indicating an error in one of transmission of the e-mail by the image data communication apparatus and reception of the e-mail by the receiving apparatus.

21. The image data communication apparatus according to claim 20, wherein the image data attached to the e-mail is converted into a format for e-mail transmission.

22. A method for controlling an image data communication apparatus connected to an image data source and to a network, and transmitting image data attached to an e-mail to a receiving apparatus via the network, the e-mail including a mail from command and a mail message, a memory storing a default mail address, a mail address of a user being an address other than the default mail address, the method comprising;

P24510.02

setting the default mail address into the mail from command of the e-mail to which the image data is attached when the mail address of the user is not input;
and

setting the mail address of the user into the mail from command of the e-mail to which the image data is attached when the mail address of the user is input, whereby, when an error occurs, the mail address of the user set into the mail from command of the e-mail is utilized as a destination of a mail error message.

23. The method according to claim 22, wherein the image data attached to the e-mail is converted into a format for e-mail transmission.

24. A method for controlling an image data communication apparatus connected to an image data source and to a network, and transmitting image data attached to an e-mail to a receiving apparatus via the network, the e-mail including a mail from command and a mail message, a memory storing a default mail address, a mail address of a user being an address other than the default mail address, the method comprising;

setting the default mail address into the mail from command of the e-mail to which the image data is attached when the mail address of the user is not input;
and

setting the mail address of the user into the mail from command of the e-mail to which the image data is attached when the mail address of the user is input, whereby, when an error occurs, a mail error message is returned to the mail address of the user.

25. The method according to claim 24, wherein the image data attached to the e-mail is converted into a format for e-mail transmission.

26. A method for controlling an image data communication apparatus connected to an image data source and to a network, and transmitting image data

P24510.02

attached to an e-mail to a receiving apparatus via the network, the e-mail including a mail from command and a mail message, a memory storing a default mail address, a mail address of a user being an address other than the default mail address, the method comprising;

 setting the default mail address into the mail from command of the e-mail to which the image data is attached when the mail address of the user is not input; and

 setting the mail address of the user into the mail from command of the e-mail to which the image data is attached when the mail address of the user is input, whereby, when an error occurs, a mail error message is returned to the mail address of the user, the mail error message indicating an error in one of transmission of the e-mail by the image data communication apparatus and reception of the e-mail by the receiving apparatus.

27. The method according to claim 26, wherein the image data attached to the e-mail is converted into a format for e-mail transmission.

28. A method for controlling an image data communication apparatus connected to a network, and transmitting image data attached to an e-mail, the e-mail including a mail from command and a mail message, a memory storing a default mail address, a mail address of a user being an address other than the default mail address, the method comprising;

 setting the default mail address into the mail from command of the e-mail to which the image data is attached when the mail address of the user is not input;

 setting the mail address of the user into the mail from command of the e-mail to which the image data is attached when the mail address of the user is input, whereby, when an error occurs, the mail address of the user set into the mail from command of the e-mail is utilized as a destination of a mail error message; and

P24510.02

transmitting the image data attached to the e-mail to a receiving apparatus via the network.

29. The method according to claim 28, wherein the image data attached to the e-mail is converted into a format for e-mail transmission.

30. A method for controlling an image data communication apparatus connected to a network, and transmitting image data attached to an e-mail, the e-mail including a mail from command and a mail message, a memory storing a default mail address, a mail address of a user being an address other than the default mail address, the method comprising;

setting the default mail address into the mail from command of the e-mail to which the image data is attached when the mail address of the user is not input;

setting the mail address of the user into the mail from command of the e-mail to which the image data is attached when the mail address of the user is input, whereby, when an error occurs, a mail error message is returned to the mail address of the user; and

transmitting the image data attached to the e-mail to a receiving apparatus via the network.

31. The method according to claim 30, wherein the image data attached to the e-mail is converted into a format for e-mail transmission.

32. A method for controlling an image data communication apparatus connected to a network, and transmitting image data attached to an e-mail, the e-mail including a mail from command and a mail message, a memory storing a default mail address, a mail address of a user being an address other than the default mail address, the method comprising;

setting the default mail address into the mail from command of the e-mail to which the image data is attached when the mail address of the user is not input;

P24510.02

setting the mail address of the user into the mail from command of the e-mail to which the image data is attached when the mail address of the user is input, whereby, when an error occurs, a mail error message is returned to the mail address of the user, the mail error message indicating an error in one of transmission of the e-mail by the image data communication apparatus and reception of the e-mail by the receiving apparatus; and

transmitting the image data attached to the e-mail to a receiving apparatus via the network.

33. The method according to claim 32, wherein the image data attached to the e-mail is converted into a format for e-mail transmission.
